

Information regarding the type of presentation at the 2011 Australian Conference of Science and Medicine in Sport

The Australian Conference of Science and Medicine in Sport Scientific and Organising Committee wishes to confirm the equal value and importance of poster or podium presentations selected for inclusion in the 2011 ACSMS Program.

The ACSMS Scientific and Organising Committee has over recent years ensured that all sessions are afforded high standing within the program and has successfully raised the profile of poster sessions to ensure they are afforded equivalent presentation status to podium presentations.

This has been achieved through the delivery of attractive poster sessions which stand alone and are without 'competition' in the conference program to ensure stronger interaction and exposure of work to all delegates in the one session. In recent years these sessions have been rated as one of the most highly valued sessions in the program.

The 2011 ACSMS poster session will again be offered in this format and will therefore have the same scientific impact and scientific value as podium presentations.

The ACSMS Scientific and Organising Committee wish to invite funding institutions to consider all types of presentations as equally rewarding.
